No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 80

RESULT 2 US-10-739-930-10656

Sequence 10656, Application US/10739930
Publication No. US20040216190A1
Publication No. US20040216190A1
GENERAL INFORMATION:
APPLICANT: KOVAlic, David K.
TITLE OF INVENTION: NUCLEIC ACID MOLECULES AND OTHER MOLECULES ASSOCIATED WITH TITLE OF INVENTION: PLANTS AND USES THEREOF FOR PLANT IMPROVEMENT FILE REFERENCE: 38-21(53377)B
CURRENT APPLICATION NUMBER: US/10/739,930
CURRENT APPLICATION NUMBER: US/10/739,930
CURRENT FILING DATE: 2003-12-18
NUMBER OF SEQ ID NOS: 11088
SEQ ID NO 10656

RESULT 1 ABB96919 Human tumour antigen related peptide SEQ ID NO 14. Human; tumour; antigen; HLA-A2; cytotoxic T cell; cytostatic; cancer; 21-JUN-2002 ABB96919; ABB96919 standard; peptide; 9 AA. 31-JUL-2000; 2000JP-00231814. 30-JUL-2001; 2001WO-JP006526. 07-FEB-2002. WO200210369-A1. Homo sapiens. vaccine. Itoh K; (ITOH/) ITOH K. (first entry)

Tumor antigens inducing and/or activating HLA-A2-restricted tumor-specific cytotoxic T cells, useful in diagnosis of and screening drugs e.g. cancer vaccines for specific treatment of pancreatic cancer.

WPI; 2002-291857/33.

Claim 1; Page 21; 127pp; Japanese.

The invention relates to a peptide comprising an amino acid sequence selected from 44 fully defined amino acid sequences (ABB96906-ABB969549) and a polypeptide comprising an amino acid sequence selected from the 9 fully defined amino acid sequences (ABB969143-ABB97151). The above comprise a tumour antigen inducing or activating HLA-A2-restricted tumour specific cytotoxic T cells, which recognise HLA-A2 and a tumour antigen peptide and is thus activated. The peptides and polypeptides have cytostatic activity. The tumour antigen is useful in diagnosis of and screening drugs for specific treatment of pancreatic cancer, colon cancer and stomach cancer including in the form of vaccines. The present sequence is that of a tumour antigen peptide, useful to the invention

                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a peptide comprising an amino acid sequence selected from 44 fully defined amino acid sequences (ABB9696-ABB96949) and a polypeptide comprising an amino acid sequence selected from the 9 fully defined amino acid sequences (ABB97151). The above comprise a tumour antigen inducing or activating HLA-R2-restricted tumour specific cytotoxic T cells, which recognise HLA-R2 and a tumour antigen peptide and is thus activated. The peptides and polypeptides have cytostatic activity. The tumour antigen is useful in diagnosis of and screening drugs for specific treatment of pancreatic cancer, colon cancer and stomach cancer including in the form of vaccines. The present sequence is that of a tumour antigen peptide, useful to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tumor antigens inducing and/or activating HLA-A2-restricted tumor-
specific cytotoxic T cells, useful in diagnosis of and screening drugs
e.g. cancer vaccines for specific treatment of pancreatic cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Itoh
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method for the detection of antigen specific T-cells in a blood sample involving the use of a plurality of antigenic peptides. The method comprises sampling of peripheral blood monocytes; stimulation of the collected peripheral blood monocytes with antigens without direct use of antigen presenting cells; and detection of T-cells specific to the antigen in the stimulated monocytes. The method is particularly used for the detection of cancer as it can be used in semi-quantitative determination of cancer specific T-cells. It can also be used for cancer vaccine therapy for patients with cervical or prostate cancer. The method can additionally be used to monitor of cellular immunity and cancer immune therapy by detection of specific T-cell frequencies. Sequences ABR84350-ABR84365 represent HLA-A2 (human leukocyte antigen) peptides of human origin used in an example from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A detection method of antigen specific T-cells, comprises the use of plural antigenic peptides, useful in semi-quantitative determination of cancer specific T-cell frequencies and for monitoring cellular immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antigen specific T-cell; detection; diagnosis; cancer specific T-cell; cancer; tumour; cervical cancer; prostate cancer; cellular immunity; immune therapy; cytostatic; immunostimulant; vaccine; antigenic peptid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a binding peptide for an eukaryotic Initiation Factor 4E (eIF4E) protein. The specification describes eIF4G and eIF4E binding agents, such as peptides or peptidemimetrics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibition of, or increased cytotoxicity to tumour cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Use of eukaryotic Initiation Factor 4E (elF4E) binding agents e.g. binding peptide (elF4E-BP) derivatives as anticancer or antitumor (for inducing apoptosis in e.g. mammalian tumor cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a binding peptide for an eukaryotic Initiation Factor 4E (eIF4E) protein. The specification describes ell and eIF4E binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammallan cells. Specifically, the peptides result in growth inhibitiof, or increased cytotoxicity to tumour cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Use of eukaryotic Initiation Factor 4E (elF4E) binding agents e.g. binding peptide (elF4E-BP) derivatives as anticancer or antitumor for inducing apoptosis in e.g. mammalian tumor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 12

                                                                                                                    a 4E-BPI (a member of eukaryotic initiation factor 4E (eIF-4E)-binding protein 1) shows a phenotype of an altered glucose and/or fat metabolism when compared to a control animal. The products of the invention have antidiabetic and ancrectic activity. The non-human transgenic animals are useful as models for the investigation of lipid and glucose metabolism, energy homeostasis and associated diseases. The transgenic animals are also useful for selection and identification of modulators of the expression and/or activity of 4E-BPI and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition disorder, anti-diabetes and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BPI an modulate fat tissue growth, glucose metabolism and weight gain in an animal
                                                                                                                                                                                                                                                                                                                                                                                                                  Non-human transgenic animal useful as model for studying lipid and glucose metabolism, has germ and somatic cells containing knockout mutation in DNA encoding eukaryotic initiation factor 4E-binding protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryotic initiation factor; eIF4E; transgenic animal; antidiabetic; knockout mutation; 4E-BP1; glucose metabolism; fat metabolism; anorectic; drug; anti-obesity; anti-fat deposition; anti-metabolic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                           This invention describes a novel non-human transgenic animal (I) whose germ cells and somatic cells contain a knockout mutation in DNA encodi

                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel non-human transgenic animal (I) whose germ cells and somatic cells contain a knockout mutation in DNA encoding a 4E-BPI (a member of eukaryotic initiation factor 4E (eIF-4E)-binding protein 1) shows a phenotype of an altered glucose and/or fat metabolism when compared to a control animal. The products of the invention have antidiabetic and anorectic activity. The non-human transgenic animals are useful as models for the investigation of lipid and glucose metabolism, energy homeostasis and associated diseases. The transgenic animals are also useful for selection and identification of modulators of the expression and/or activity of 4E-BPI and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition disorder, anti-diabetes and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BPI in the encokout mice demonstrates that an alteration of 4E-BPI can modulate fat the context of the disruption of 4E-BPI can modulate fat

                                                                                                                                                                                                                                                                                                ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                          CC This invention describes a novel non-human transgenic animal (I) whose CC germ cells and somatic cells contain a knockout mutation in DNA encoding CC a 4E-BP1 (a member of eukaryotic initiation factor 4E (eIF-4E)-binding CC protein 1) shows a phenotype of an altered glucose and/or fat metabolism CC when compared to a control animal. The products of the invention have CC antidiabetic and anorectic activity. The non-human transgenic animals are CC cuseful as models for the investigation of lipid and glucose metabolism, CC energy homeostasis and associated diseases. The transgenic animals are CC also useful for selection and identification of modulators of the CC expression and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition disorders, anti-disabetes and anti-metabolic diseases associated with fat CC deposition disorders. The effect of the disruption of 4E-BP1 in the CC knockout mice demonstrates that an alteration of 4E-BP1 can modulate fat the superior of the growth, glucose metabolism and weight gain in an animal
                                                                                                                                                                                                                                                                                                                                     Query Match

The products of the invention have antidiabetic and anorectic activity. The non-human transgenic animals are useful as models for the investigation of lipid and glucose metabolism, energy homeostasis and associated diseases. The transgenic animals are also useful for selection and isleentification of modulators of the expression and/or activity of 4E-BP1 and for screening drugs to isolate expression and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obseity, anti-fat deposition disorder, anti-diabetes and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BP1 in the knockout mice demonstrates that an alteration of 4E-BP1 can modulate fat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Non-human transgenic animal useful as model for studying lipid and glucose metabolism, has germ and somatic cells containing knockout mutation in DNA encoding eukaryotic initiation factor 4E-binding protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              drug; anti-obesity; anti-fat deposition; anti-metabolic.

The products of the invention have antidiabetic and anorectic activity. The non-human transgenic animals are useful as models for the investigation of lipid and glucose metabolism, energy homeostasis and associated diseases. The transgenic animals are also useful for selection and identification of modulators of the expression and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obestty, anti-fat deposition disorders. The effect of the diseases associated with fat deposition disorders. The effect of the diseases associated with fat deposition disorders. The effect of the disruption of 4E-BP1 in the knockout mice demonstrates that an alteration of 4E-BP1 can modulate fat tissue growth, glucose metabolism and weight gain in an animal
                                                                                                                                                                                                                               Eukaryotic initiation factor; eIF4E; transgenic animal; antidiabetic; knockout mutation; 4E-BP1; glucose metabolism; fat metabolism; anorec drug; anti-obesity; anti-fat deposition; anti-metabolic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Non-human transgenic animal useful as model for studying lipid and glucose metabolism, has germ and somatic cells containing knockout mutation in DNA encoding eukaryotic initiation factor 4E-binding protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sonenberg

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein 1) shows a phenotype of an altered glucose and/or fat metabolism when compared to a control animal. The products of the invention have antidiabetic and anorectic activity. The non-human transgenic animals are useful as models for the investigation of lipid and glucose metabolism, energy homeostasis and associated diseases. The transgenic animals are also useful for selection and identification of modulators of the expression and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obseity, anti-fat deposition disorder, anti-diabetes and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BP1 in the knockout mice demonstrates that an alteration of 4E-BP1 can modulate fat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              germ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     a 4E-BP1 (a member of eukaryotic initiation factor 4E (eIF-4E) binding protein 1) shows a phenotype of an altered glucose and/or fat metabolism when compared to a control animal. The products of the invention have antidiabetic and anorectic activity. The non-human transgenic animals are useful as models for the investigation of lipid and glucose metabolism, energy homeostasis and associated diseases. The transgenic animals are also useful for selection and identification of modulators of the expression and/or activity of 4E-BP1 and for screening drugs to isolate tharapeutic agents which are useful as anti-obesity, anti-fat deposition disorder, anti-diabetes and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BP1 in the knockout mice demonstrates that an alteration of 4E-BP1 can modulate fat the control of the control of the discussion of the control of the control of the control of the discussion of the control of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryotic initiation factor; eIF4E; transgenic animal; antidiabetic; knockout mutation; 4E-BP1; glucose metabolism; fat metabolism; anorectic; drug; anti-obesity; anti-fat deposition; anti-metabolic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         16-FEB-2001

AABB4401-15 represent 4B-binding sites. 4E-binding protein 1 (4E-BP1) is a repressor of cap-dependent translation initiation, and selectively activates apoptosis in Ras-transformed fibroblasts and eliminates Ras-induced chemoresistance. The effects of 4E-BP1 are strictly dependent on its ability to sequester the translation initiation factor elP4E, thereby preventing its assembly into an active pre-initiation complex. The specification describes a method for inducing apoptosis in a cell in which the apoptosis pathway is inhibited. The method comprises decreasing the amount of elF4F pre-initiation complex by sequestration of elF4E, thus relieving an apoptosis block. The method is useful for modulating pro-apoptotic and anti-apoptotic pathways in cells, especially in Ras-transformed cells. Thus, the method is useful for treating cancer. The elF4E sequestering agent, 4E-BP1 or its elF4E binding portion is useful for treating high proliferative cells

Inducing apoptosis in a cell in which the apoptosis pathway is inhibited, useful for treating cancer or highly proliferative cells, comprises decreasing the amount of elF4F pre-initiation complex, relieving an

The transgenic animals are also useful for selection and identification of modulators of the expression and/or activity of 4E-BP1 and for screening drugs to isolate therapeutic agents which are useful as anti-obesity, anti-fat deposition disorder, anti-diabetes and anti-metabolic diseases associated with fat deposition disorders. The effect of the disruption of 4E-BP1 in the knockout mice demonstrates that an alteration of 4E-BP1 can modulate fat tissue growth, glucose metabolism and weight gain in an animal

   pred, No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score
